

ABSTRACT OF THE DISCLOSURE

A connector is provided with a covered electric wire in which a front end of a core is exposed by peeling off a coating, a terminal provided with a caulking portion having one or more openings, and a resin housing in which an outer periphery of the terminal and a part of the insulator are inserted therein. The caulking portion clamps the core with exposing a part of the core from the openings. The resin is impregnated to the core not only from both ends of the caulking portion but also from the openings.
